

## EPIC TRANSCEIVERS

Epic Broadband Solutions carries a full range of Optical Transceivers (GBIC, SFP, SFP Plus, XFP, X2 and XENPAK transceivers from 100Base to 10GB and above).

### Why Epic Transceivers?

#### Quality

Epic branded transceivers have been built by the same high quality contract manufacturers that build for the major Network Equipment Manufacturers such as Cisco, Juniper, Extreme and Force 10. Each and every Epic transceiver is individually tested and custom coded with the unique product initialization strings for the specific transceiver. All Epic transceivers are certified 100% compliant and guaranteed compatible with all OEM Network Equipment Manufacturers switch, router and media converter product lines. **Epic transceivers have been selected and distributed through authorized Network Equipment Manufacturer distribution channels for the past 8 years with no compatibility issues to date.**

#### Savings

While most Network Equipment Manufacturers do not manufacture their own transceivers, they do inflate the prices of these commonly used parts and devise a huge portion of their net profits from the distribution of their 3<sup>rd</sup> party transceivers. No wonder they utilize whatever scare tactics they can to maintain the transceiver, memory and cable business!

#### Warranty

Epic transceivers carry a Lifetime Warranty. We are so confident in the quality of the Epic transceivers that we offer advance cross ship replacements for any DOA and a \$250 service re-imbusement for your network integrator or reseller to provide warranty service. We couldn't stand behind this offer if we weren't certain of the quality and workmanship that goes into each and every Epic transceiver.

Under no circumstances will the use of Epic transceivers void any Network Equipment Manufacturers warranty coverage for their respective equipment!

Epic provides 30 day evaluation units with a valid purchase order.
